SUMMARY

Full-stack Software Engineer with experience building and deploying end-to-end web applications using React.js, TypeScript, Node.js, Express.js, PostgreSQL, Supabase, and cloud platforms. Skilled in responsive frontend development, REST API design, authentication and authorization, relational database design, debugging, testing, and production deployment. Experienced in delivering scalable client and product features, with additional hands-on experience building AI-enabled applications using LangChain, LLM APIs, embeddings, and vector databases.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, SQL, HTML5, CSS3

Frontend: React.js, Tailwind CSS, Responsive Design, React Native

Backend and Databases: Node.js, Express.js, REST APIs, PostgreSQL, MongoDB, Supabase, Prisma, JWT Authentication

Cloud and Developer Tools: Git, GitHub, Postman, AWS EC2, AWS S3, Vercel, Netlify, Render, Figma, API Testing, Debugging, Agile Development

AI Technologies: LangChain, LLM API Integration, Retrieval-Augmented Generation (RAG), Embeddings, Vector Databases, Prompt Engineering

Certifications: Scrimba Fullstack Developer Path, Scrimba AI Engineer Path

WORK EXPERIENCE

Freelance Software Engineer | Various Clients

September 2024 – Present

- Redesigned and developed responsive websites for three small businesses using React.js, Node.js, Supabase, Figma, and SEO-focused frontend practices, improving mobile usability and increasing user engagement and booking inquiries by 30%.
- Built custom client features including fare calculators, service pages, reusable UI sections, form workflows, and conversion-focused landing pages, replacing outdated static websites with scalable digital platforms.
- Developed reusable React components and client-side functionality that improved maintainability and reduced repeated manual website updates for clients.

Software Engineer | Residence Essential Limited

London, UK | **March 2024 – August 2024**

- Built a UK property valuation MVP from the ground up, developing a full-stack web application, REST-style scoring APIs, and pricing logic that reduced property valuation time from days to under 30 seconds.
- Designed data-processing workflows and AWS EC2/S3 infrastructure for UK-wide geospatial, crime, and air-quality datasets, enabling real-time valuation scoring while reducing storage costs by 40%.
- Debugged API and data-processing issues, validated scoring outputs, and supported product documentation, investor whitepapers, SEO content, and pitch materials used for estate-agent validation.

Associate Tutor | University of Dundee

Dundee, UK | **January 2023 – December 2023**

- Delivered weekly practical labs covering UNIX, C++, system architecture, algorithms, and programming fundamentals to 50+ undergraduate students through hands-on coding and debugging sessions.
- Provided one-to-one debugging and code-review support to 20+ students, improving programming accuracy, problem-solving confidence, and assignment pass rates by 30%.
- Designed interactive quizzes and project-based learning materials covering software fundamentals, systems concepts, and AWS services including EC2 and S3.

Software Engineer | Cloudfaru

Hyderabad, India | **March 2022 – November 2022**

- Developed responsive interfaces using React.js and React Native for franchise and ticketing platforms, improving cross-device accessibility, navigation, and user experience.
- Built an API-driven admin dashboard using reusable UI components and operational workflows, reducing manual administrative tasks by 35%.
- Integrated e-KYC APIs and tested customer onboarding workflows using Postman, accelerating onboarding by 50% for Balaji Equities Ltd.

PROJECTS

AI-Powered PDF Knowledge Assistant | GitHub | React.js, Node.js, Express.js, LangChain, Supabase, pgvector, LLM APIs

- Built a full-stack retrieval-augmented generation application that allows users to upload PDF documents and ask natural-language questions about their contents.

- Implemented PDF ingestion, text chunking, embeddings, semantic retrieval, and vector storage using LangChain and Supabase pgvector to retrieve contextually relevant document sections.
- Developed an Express.js API and React chat interface that combine retrieved document context with an LLM to generate grounded answers with source-page references.

GitHub Repo Explorer | GitHub | React.js, TypeScript, Node.js, Express.js, Prisma, PostgreSQL, JWT

- Built and deployed a full-stack TypeScript application that searches public GitHub repositories by username and allows authenticated users to save repositories to personalised favourites.
- Developed secure registration and login flows using bcrypt password hashing, JWT authentication, protected Express.js routes, request validation, and PostgreSQL persistence through Prisma and Supabase.
- Integrated the GitHub API and implemented responsive repository search, loading and error states, saved-repository tracking, toast notifications, and mobile-friendly frontend components.

JobTracker Application | GitHub | React.js, Node.js, Express.js, Supabase, PostgreSQL, JWT

- Built and deployed a full-stack job application tracking platform with secure registration, login, password hashing, JWT authentication, and protected job-management routes.
- Implemented authentication middleware and user-specific authorization so users can create, view, edit, and delete only their own job applications.
- Designed PostgreSQL tables for users and jobs with relational ownership, application status tracking, applied dates, filtering, sorting, and complete CRUD API support.

Assistive Technology Loan Library System | GitHub | React.js, Node.js, MongoDB

- Built a full-stack inventory and equipment loan-management platform that reduced assistive-technology loan processing time by 40% compared with spreadsheet-based workflows.
- Implemented authentication, role-based access control, equipment tracking, and CRUD functionality for multiple user types.
- Onboarded 10+ active users within 10 days of launch, demonstrating demand for a structured digital system over the previous spreadsheet-based process.

EDUCATION

Master of Science in Computer Science

University of Dundee, United Kingdom

2023 – 2024

- **Relevant Coursework:** Advanced Programming, DevOps and Microservices, Machine Learning
- **Dissertation:** Developed an Assistive Technology Loan Library System for the MSc EduAT programme.

Bachelor of Engineering in Computer Science and Engineering

University College of Engineering, Osmania University, India

2018 – 2021

- **Relevant Coursework:** DBMS, Software Engineering, Computer Networks, Cloud Computing
- **Dissertation:** Developed a MERN-stack E-commerce Web Application.
